

ABSTRACT OF THE DISCLOSURE

Disclosed herein are a gelling agent composed of an isoleucine derivative having a carbazolyl group, and a
5 process for preparing a gelling agent, which comprises reacting an isoleucine derivative having a specific skeletal with a compound having a carbazolyl group in the presence of dichloromethane and 1-ethyl-3-(3-dimethyl-aminopropyl)carbodiimide hydrochloride to obtain an
10 isoleucine derivative having a carbazolyl group.
